

Table of Contents

1 TODAY'S DIALYSIS ENVIRONMENT

Objectives	2
Introduction.....	3
Overview of Kidney Failure and Dialysis	3
Dialysis is Partial Kidney Replacement	4
Payment for Dialysis and Transplant	6
Quality in Dialysis	9
ESRD Networks	9
Guidelines for Dialysis Care	9
ESRD Quality Improvement Initiative	10
Quality Standards for Dialysis	10
Continuous Quality Improvement in Dialysis	11
Dialysis Technician Professionalism	12
Professional Boundaries	13
Groups You Can Join	14
Technician Certification	14
Certified Clinical Hemodialysis Technician Exam	14
Certified Clinical Hemodialysis Technician - Advanced Exam	15
Certified Hemodialysis Technician Exam	15
Certified in Clinical Nephrology Technology and Certified in Biomedical Nephrology Technology Exams	15
Certified Dialysis Water Specialists Exam	16
Conclusion	16
References.....	16

2 THE PERSON WITH KIDNEY FAILURE

Objectives	20
Introduction.....	21
Kidney Structure.....	22
Nephrons	22
Glomeruli	23
Tubular System	23
Kidney Functions	23
Excretory Functions	23
Endocrine Functions.....	24
Electrolyte Balance	24
Blood Pressure Control.....	24
Acid-base Balance	24
Types of Kidney Failure	24
Acute Kidney Failure.....	25
Chronic Kidney Disease	25
Causes of Kidney Failure	25

Diabetes	26
High Blood Pressure	26
Glomerular Diseases	27
Polycystic Kidney Disease	27
Other Causes of CKD	27
Problems Caused by Kidney Failure	27
Electrolyte Imbalances	27
Uremia	29
Anemia	30
Left Ventricular Hypertrophy	31
Pericarditis	33
Mineral Bone Disorder.....	33
Dialysis-Related Amyloidosis.....	34
Neuropathy	35
Pruritus	35
Sleep Problems	36
Bleeding Problems	36
Common Dialysis Blood Tests	37
Treatment Options.....	37
Transplant	37
Dialysis	41
Peritoneal Dialysis	42
Hemodialysis	45
Medical Management Without Dialysis	48
HD Care Team	49
Patient	49
Family Members	49
Nephrologist	50
Nurses	50
Social Workers	50
Dialysis Technicians	50
Renal Dietitians/Nutritionists	50
Starting Standard In-Center HD:	
The Risky First 90 Days	51
Safe Vascular Access.....	51
Avoiding Malnutrition.....	51
Tailoring the First Dialysis Treatments.....	51
Nutrition for People on Standard In-Center HD	52
Calories and Malnutrition	52
Obesity.....	53
Fluid Intake and Water Weight.....	53
Sodium	56
Potassium	57
Calcium	57
Phosphorus	58
Vitamins	59
Helping Patients Cope	59
Life Changes and Empathy	60

Money Concerns	61	Fluid Dynamics in Hemodialysis	94
Travel	61	Hemodiafiltration	95
Body Image	62	Applying Scientific Principles	
Sexuality and Fertility.....	62	to Peritoneal Dialysis	96
Pain	63	Diffusion in Peritoneal Dialysis	97
Mood	63	Osmosis in Peritoneal Dialysis.....	97
The Health Insurance Portability and Accountability Act and Patient Confidentiality.....	64	Convection in Peritoneal Dialysis	98
Active Listening.....	64	Adsorption in Peritoneal Dialysis	98
Rehabilitation	65	Conclusion	98
Self-Management—Not Compliance.....	65	Appendix A:	
Patient Education: Creating Expert Patients	66	Metric System and Temperature Conversions...99	
Attitude	66	References.....	99
Answers.....	66		
Action	68		
Special Challenges.....	70		
Challenges and What You Can Do	70		
Coping with Patient Deaths.....	71		
Patient Resources.....	72		
Website Resources	72		
Patient Organizations.....	73		
Government Resources	74		
Conclusion	74		
References.....	75		
3 PRINCIPLES OF DIALYSIS			
Objectives	82		
Introduction	83		
Basic Concepts and Principles.....	83		
Solutions	83	Dialysate.....	111
Solubility	83	Dialysate Conductivity.....	111
Diffusion	84	Mixing Dialysate Concentrates	112
Convection	85	Hemodialysis Machines	112
Osmosis.....	85	Dialysate Circuit	113
Adsorption	86	Dialysate Mixing.....	113
Hydraulic Pressure	86	Dialysate Delivery	113
Fluid Dynamics	86	Monitors and Alarms	114
Filtration and Ultrafiltration	87	Ultrafiltration Control.....	117
Fluid Compartments in the Human Body	87	Advanced Options.....	121
Applying Scientific Principles to Hemodialysis	87	Extracorporeal Circuit	122
Solutions in Hemodialysis: Blood and Dialysate	88	Blood Tubing	122
Dialyzers and Diffusion in Hemodialysis	89	Transducer Protectors	123
Osmosis, Ultrafiltration, and Organ Stunning in Hemodialysis	90	Blood Pump	124
Convection in Hemodialysis	94	Heparin Pump	125
Adsorption in Hemodialysis	94	Venous Line Clamp	126
		Safety Monitors	126
		Waste Disposal and “Green” Dialysis	130
		Medical Waste	130
		Dialysis Water.....	130
		Conclusion	130
		References	131

5 DIALYZER REPROCESSING	133
Objectives	134
Introduction.	135
History of Dialyzer Reprocessing.	135
Hollow Fiber Dialyzers and Reuse.	135
Dialyzer Reuse Numbers	136
Why Dialyzers are Reused.	136
Saving Dollars and Reducing Medical Waste	136
Safety of Reuse	136
Reuse and Exposure to Pathogens	137
Reuse and Exposure to Germicides	137
Reuse and Dialyzer Efficiency.	138
Rules for Dialyzer Reprocessing	138
Dialyzer Labeling for Reuse	138
Automated Versus Manual Reprocessing	139
Preparing a Dialyzer for First Use	139
Preprocessing.	140
After Dialysis	140
Pre-clean the Dialyzer	140
Clean and Disinfect the Header.	141
Test Dialyzer Performance.	141
Rejecting a Dialyzer	142
Disinfect the Dialyzer.	142
Handling Hazardous Materials.	142
Safety Training.	143
Peracetic Acid Safety	143
Formaldehyde Safety	143
Glutaraldehyde Safety	143
Storage of Reprocessed Dialyzers.	144
Prepare for the Next Use.	144
Inspect the Dialyzer	144
Remove the Germicide.	144
Check the Dialyzer Prior to Treatment.	145
Documentation	145
Quality Assurance and Quality Control	145
Conclusion	147
References	147
6 VASCULAR ACCESS	149
Objectives	150
Introduction.	151
Types of Access	151
Fistula Basics	151
Graft Basics.	152
Catheter Basics	153
Access Planning	154
Fistulas in Detail.	155
How Fistulas are Made.	155
Body Image and Patient Resistance to Fistulas	156
Vessel Mapping and Fistula Surgery.	156
Assessing Fistula Maturity.	157
Starting HD with a Mature Fistula.	158
Wash Your Hands.	159
Examine the Fistula	159
Prepare the Access Skin.	160
Apply a Tourniquet	161
Place the Needles	161
Rope Ladder Technique.	162
Avoid Needle Stick Injuries	165
Buttonhole Technique	165
Tape the Needles After Insertion.	167
Monitor Arterial Pressure	168
Help Patients with Needle Fear	169
Reduce Pain from Needle Insertion	169
Fistula Care After a Treatment.	171
Grafts in Detail	172
How Grafts are Placed	172
Starting HD with a Graft	173
Prepare the Access Skin.	174
Wash Your Hands.	174
Examine the Graft	174
Find the Direction of Blood Flow.	174
Inserting Sharp Needles in a Graft	174
Graft Care After an HD Treatment	175
Complications of Fistulas and Grafts During Use	175
Infiltration.	175
Bleeding During HD	176
Bleeding After HD	177
Recirculation	178
Steal Syndrome	178
Longer Term Complications of Fistulas and Grafts	178
Aneurysms	179
Pseudoaneurysms.	179
Stenosis.	180
Thrombosis	181
Access Monitoring and Surveillance	182
Infection	185
HD Catheters in Detail.	187
Catheter Placement	187
How HD Catheters Work	187
Veins Used for Catheters	188
Care of Hemodialysis Catheters.	189
Starting HD with a Catheter	189
Complications of HD Catheters	191
Infection	191

Catheter Disconnection	192	Conduct an Alarm Safety Check.....	227
Catheter Loss	192	Evaluate the Patient.....	227
Central Venous Stenosis	192	Weigh the Patient	228
Slow Blood Flow Rate.....	192	Check for Edema	230
Improving Vascular Access Outcomes	192	Take the Patient's Pulse.....	230
Continuous Quality Improvement.....	192	Take the Patient's Blood Pressure.....	230
Clinical Practice Guidelines	193	Count the Respiration Rate	232
Conclusion	195	Take the Patient's Temperature.....	232
References.....	196	Check the Vascular Access	233
7 HEMODIALYSIS PROCEDURES AND COMPLICATIONS.....207			
Objectives	208	Ask About General Physical and Emotional Health.....	233
Introduction.....	209	Starting a Dialysis Treatment.....	234
Infection Control	209	Calculate How Much Water to Remove.....	234
How Infections Spread.....	209	Cannulate or Connect the Patient's Access.....	239
Hemodialysis Infection Control Precautions	210	Draw Blood for Laboratory Testing.....	239
Hand Hygiene	210	Start the Dialysis Machine	241
When and How to Use Aseptic Technique.....	211	Monitoring During Dialysis.....	242
Personal Protective Equipment	213	Vascular Access	243
Safe Handling of Equipment and Supplies After Treatment.....	213	General Patient Condition.....	243
Bloodborne Diseases.....	214	Giving Medicines.....	243
Hemodialysis Procedures and Complications	215	Patient Comfort and Safety	244
Antibiotic-resistant Bacteria.....	216	Anticoagulation	245
Other Infection Concerns	217	Machine Monitoring	246
Giving Medications and Solutions.....	218	Hemodialysis Complications	247
Needles	218	Clinical Complications	247
Syringes	218	Technical Complications	261
Safe Use of Syringes and Needles	218	Post-dialysis Procedures	263
Drawing Up Medicine	219	End the Dialysis Treatment.....	263
Using IV Solutions.....	220	Take the Patient's Vital Signs and Weight	263
Body Mechanics	220	Document the Treatment	264
Lifting and Carrying	220	Clean Up the Equipment.....	264
Patient Transfers	221	Measuring Dialysis Adequacy	264
Patients with Walkers.....	221	Urea Kinetic Modeling	265
Chair-to-Chair Transfers	222	Drawing Pre- and Post-dialysis BUN.....	265
Stand and Pivot Technique.....	222	Minimum Delivered and Prescribed Dose of Dialysis	266
Using a Slide Board.....	222	Factors that Affect the Dialysis Treatment	266
Portable Lift Devices.....	223	Dialysis Dose and Patient Well-Being	267
Stretcher-to-Chair Transfers	223	Conclusion	267
Stretcher-to-Bed Transfers.....	223	References	268
Documentation	223	8 WATER TREATMENT	271
Electronic Charting.....	224	Objectives	272
Paper Charting: Writing an Entry in the Medical Record	224	Introduction.....	273
Predialysis Treatment Procedures	224	Water Supply.....	273
The Treatment Plan	224	Drinking Water Contaminants	273
		Drinking Water Standards	273
		Tap Water Treatment	274
		Dialysis Water	275

AAMI Standards for Dialysis Water	275	Recovering from an Emergency.....	316
Design of a Dialysis Water Treatment System	277	Plan for Patient Care.....	316
Pretreatment Components.....	278	Physical Plant Safety	317
Purification Components.....	278	Emotional Recovery After a Disaster	318
Distribution System	278	Quality Improvement.....	319
Parts of a Water Treatment System.....	280	Conclusion	320
Reverse Osmosis (RO)	280	Appendix A: Resources	321
Pretreatment Components	281	Appendix B: 3-Day Emergency Diet Plan for Dialysis Patients	322
Purification Components.....	284	References	324
Distribution System	284		
Monitoring a Water Treatment System.....	287		
How to Monitor and Maintain Water Treatment			
System Components	287		
Analyze Water Quality	293		
RO Water Quality.....	293	GLOSSARY AND INDEX.....	325
DI Water Quality.....	293		
Monitor Water for Bacteria and Endotoxins	295	Acronyms	326
Monitor Water for Chemicals	296	Glossary	333
Patient Monitoring	299		
Conclusion	299		
Appendix A: EPA Tap Water Standards	300		
References	302		

9 EMERGENCY PLANNING AND RESPONSE 305

Objectives	306
Introduction.....	307
Regulations and Oversight	
of Dialysis Emergencies.....	308
Conditions for Coverage	308
The Joint Commission	308
Local and State Rules.....	308
Kidney Community Emergency Response Program ..	308
Types of Emergencies	310
Prepare for Emergencies.....	310
Anticipate, Plan, Train.....	310
Know Your Part in the Communication Plan.....	310
Plan for Clinic-level Events.....	311
Plan for Area or Regional Events.....	313
Patient Education for Emergencies.....	314
Responding to Emergencies.....	315
Set Up a Command Center	315
Triage	315
Assess Damage to the Building and Equipment	315
Maintain Staffing.....	316
